

I've had my amateur license since the early 60's and have been operating on 160 meters since 1982. For those of us who frequent this great band with all it's propagation and atmospheric challenges, it's extremely important that we segment the CW band from SSB.

RM-10352 is long overdue and I trust that the FCC will take the proactive approach and segment this band as with the others in the amateur spectrum.

Sincerely,
Bob Garrett, K3UL
